

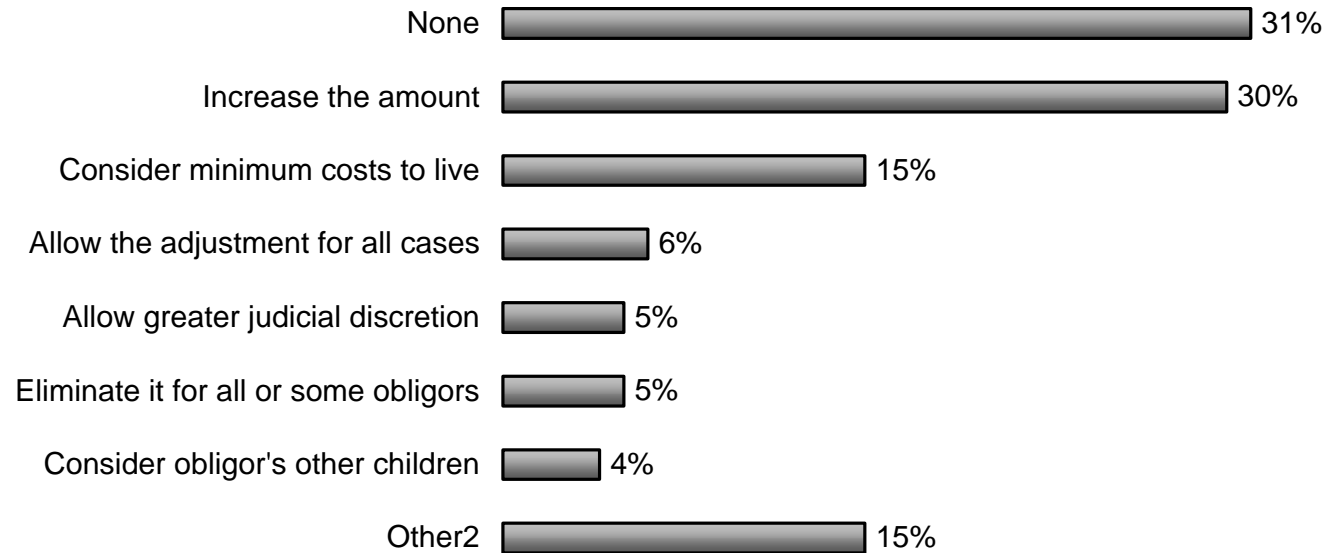

Exhibit 6-10: Changes Respondents Would like to See Made
to the Low-Income Adjustment Provision
(Percent of Respondents)¹
(n = 351)

¹. Multiple Response question, thus proportions may exceed 100%. Only comments mentioned by at least 4% of respondents who answered the question are shown in the figure. Percentages exclude respondents who did not answer the question. To compute the number of respondents who mentioned each change, multiply the percentage by 351. Thus, $30\% \times 351 = 105$ respondents would like to see the low-income adjustment amount increased.

². Other: Disregard some income to make people eligible; allow stipulations to a lower amount; decrease the adjustment amount.
